Engineering Chemistry-I How Do You Raise an Awakened Child in an Unconscious World? The birth of a child avatar should be a cause for celebration, but twentysomething Maggie Langford finds that sheltering Anna's sanctity from the intrusion of the outside world is her first priority. She wants to allow this "great soul" to develop her full spiritual potential, but others

like Maggie's Hindu guru want to enlist her to promote their own agendas. As Anna grows, so do the challenges. How do you tell a child who can heal any injury or disease that she must do it quietly, or not at all? Fortunately, Maggie can rely on Joseph, the child's spirit guide, for advice. Anna periodically whisks them away to his "astral park" for consultations. Exposed to Anna's elevated energy, Maggie flourishes and becomes a bestselling children's book author. They live a cloistered life until Child Services is alerted. Maggie becomes certified to homeschool her child and other Hindu children and all is well, until Anna transports the class to Joseph's astral park amidst a dispute about the Bhagavad Gita. When alarmed parents are told of this "excursion," Maggie and Anna are summoned to a meeting with the School Board, a confrontation that could make Anna's elevated being public knowledge. Maggie's worst nightmare could be about to take place...

Examples and Problems in Exercises are used to explain. The *Handbook of Easy Languages in Europe* describes what Easy Language is and how it is used in European countries. It demonstrates the great diversity of actors, instruments and outcomes related to Easy Language throughout Europe. All people, despite their limitations, have an equal right to information, inclusion, and social participation. This results in requirements for understandable language. The notion of Easy Language refers to modified forms of standard languages that aim to facilitate reading and language comprehension. This handbook describes the historical background, the principles and the practices of Easy Language in 21 European countries. Its topics include terminological definitions, legal status, stakeholders, target groups, guidelines, practical outcomes, education, research, and a reflection on future perspectives related to Easy Language in each country. Written in an academic yet interesting and understandable style, this *Handbook of Easy Languages in Europe* aims to find a wide audience. The book (COST Action Final report) summarises the proceedings from COST Action ES1206. COST Action ES1206, *Advanced GNSS Tropospheric Products for Severe Weather Events and Climate (GNSS4SWEC)*, was a 4-year project, running from 2013 to 2017, which coordinated new and improved capabilities from concurrent developments in GNSS, meteorological and climate communities. For the first time, the synergy of

multi-GNSS constellations was used to develop new, more advanced tropospheric products, exploiting the full potential of multi-GNSS on a wide range of temporal and spatial scales - from real-time products monitoring and forecasting severe weather, to the highest quality post-processed products suitable for climate research. The Action also promoted the use of meteorological data as an input to real-time GNSS positioning, navigation, and timing services and has stimulated knowledge and data transfer throughout Europe and beyond. Written primarily for the students of Civil and Mechanical Engineering, "A Textbook of Hydraulic Machines" has been written in lucidly and captures the essence in an apt and non-repetitive manner. Aided by a number of solved problems, including typical examples from examination point of view, the book has been a benchmark in the subject for close to 20 years. The volume contains original research findings, exchange of ideas and dissemination of innovative, practical development experiences in different fields of soft and advance computing. It provides insights into the International Conference on Soft Computing in Data Analytics (SCDA). It also concentrates on both theory and practices from around the world in all the areas of related disciplines of soft computing. The book provides rapid dissemination of important results in soft computing technologies, a fusion of research in fuzzy logic, evolutionary computations, neural

science and neural network systems and chaos theory and chaotic systems, swarm based algorithms, etc. The book aims to cater the postgraduate students and researchers working in the discipline of computer science and engineering along with other engineering branches. This book is designed to serve as a textbook for courses offered to undergraduate students enrolled in Electrical Engineering and related disciplines. The book provides a comprehensive coverage of linear system theory. In this book, the concepts around each topic are well discussed with a full-length presentation of numerical examples. Each example is unique in its way, and it is graded sequentially. This book highlights simple methods for solving problems. Even though, the subject requires a very strong mathematical foundation, wherever possible, rigorous mathematics is simplified for a quick understanding of the basic concepts. The book also includes select numerical problems to test the capability of the students. Time and frequency domain approaches for the analysis and design of linear automatic control systems have been explained using state-space and transfer function models of physical systems. All the chapters include a short theoretical summary of the topic followed by exercises on solving complex problems using MATLAB commands. In addition, each chapter offers a large number of end-of-chapter homework problems. This second edition includes a new chapter on state-space

modeling and analysis. Detailed conceptual coverage and pedagogical tools make this an ideal textbook for students and researchers enrolled in electrical engineering and related programs. This textbook provides complete coverage of the subject. Starting with a detailed description of organisational structure, relationships and culture, the text proceeds to discuss the topics such as nature of power in organisation, leadership, organisational change and organisational environment. An elaborate account of business process reengineering with respect to methodology, planning, and its relationship with IT industry is given. Finally, the text describes e-business process and knowledge management in detail. The text is profusely illustrated with numerous flow charts and diagrams. Review questions are included at the end of every chapter to help students check their understanding of the subject. This textbook is primarily designed for the students of MCA for a course in business process. It will be also useful to the students of MBA and BCA. Computer Programming: For Anna University is an indispensable text for teaching and learning computer concepts and the C programming language. Assuming no prior knowledge of programming languages on the part of the reader, this book contains a rich collection of solved examples and exercises to help one master the basics of computers and C. Strength of Materials is designed for the undergraduate students of civil

and mechanical engineering for their core paper on Strength of Materials. The book offers detailed explanations with clear illustrations and a wide variety of solved problems. The step-by-step derivations help students relate to the concepts easily. A Textbook of Engineering Physics Divided in two parts, "A Textbook of Fluid Mechanics and Hydraulic Machines" is one of the most exhaustive texts on the subject for close to 20 years. For the students of Mechanical Engineering, it can easily be used as a reference text for other courses as well. Important topics ranging from Fluid Dynamics, Laminar Flow and Turbulent Flow to Hydraulic Turbines and Centrifugal pumps are well explained in this book. A total of 23 chapters (combined both units) followed by two special chapters of 'Universities' Questions (Latest) with Solutions' and 'GATE and UPSC Examinations' Questions with Answers/Solutions' after each unit also make it an excellent resource for aspirants of various entrance examinations.
