[Constructing Modernity](#) Jan 20 2020 Naum Gabo (1890-1977), whose eventful life took him from his native Russia to Berlin, Paris, London, and finally the United States, achieved renown as one of the most inventive and controversial figures in twentieth-century sculpture. This book is the first comprehensive account of Gabo's life, career, and artistic theory and practice. Martin Hammer and Christina Lodder explore in detail the evolution of the artist's work and his aesthetic concerns, creative processes, assimilation of such new materials as plastic, and approach to public sculpture. The authors also examine his response to the scientific and political revolutions of his age and trace the origins and development of Gabo's utopian conviction that Constructivist art was profoundly in tune with modernity, social progress, and advances in science and technology. Drawing on Gabo's extensive and largely unpublished archives of letters, diaries, notebooks, models, and sketchbooks, Hammer and Lodder discuss the sculptor's work in the context of his relations with other avant-garde artists, architects, and critics, including his brother Antoine Pevsner. They also situate his aesthetic theory and practice within the Constructi

**Modelling and Control of Mini-Flying Machines** Jan 12 2022 Problems in the motion control of aircraft are of perennial interest to the control engineer as they tend to be of complex and nonlinear nature. Modelling and Control of Mini-Flying Machines is an exposition of models developed for various types of mini-aircraft: • planar Vertical Take-off and Landing aircraft; • helicopters; • quadrotor mini-rotorcraft; • other fixed-wing aircraft; • blimps. For each of these it propounds: • detailed models derived from Euler-Lagrange methods; • appropriate nonlinear control strategies and convergence properties; • real-time experimental comparisons of the performance of control algorithms; • review of the principal sensors, on-board electronics, real-time architecture and communications systems for mini-flying machine control, including discussion of their performance; • detailed explanation of the use of the Kalman filter to flying machine localization. To researchers and students in nonlinear control and its applications Modelling and Control of Mini-Flying Machines provides valuable insights to the application of real-time nonlinear techniques in an always challenging area. Advances in Industrial Control aims to report and encourage the transfer of technology in control engineering. The rapid development of control technology has an impact on all areas of the control discipline. The series offers an opportunity for researchers to present an extended exposition of new work in all aspects of industrial control.
