Paradise Lust Apr 22 2020 A “certainly weird . . . strangely wonderful . . . [and] often irresistible” search to find the real Garden of Eden (The New York Times Book Review). Where, precisely, was God’s Paradise? St. Augustine had a theory. So did medieval monks, John Calvin and Christopher Columbus. But when Darwin’s theory of evolution changed our understanding of human origins, shouldn’t the desire to put a literal Eden on the map have faded away? Not so fast. This “gloriously researched, pluckily written historical and anecdotal assay of humankind’s age-old quixotic quest for the exact location of the Biblical garden” (Elle) explores an obsession that has consumed scientists and theologians alike for centuries. To this day, the search continues, taken up by amateur explorers, clergymen, scholars, engineers and educators—romantic seekers all who started with the same simple-sounding Bible verses, only to end up at a different spot on the globe: Sri Lanka, the Seychelles, the North Pole, Mesopotamia, China, Iraq—and Ohio. Inspired by an Eden seeker in her own family, “Wilensky-Lanford approaches her subjects with respect, enthusiasm and conscientious research” (San Francisco Chronicle) as she traverses a century-spanning history provoking surprising insights into where we came from, what we did wrong, and where we go from here. And it all

makes for “a lively journey” (Kirkus Reviews).

Apples of Uncommon Character Jun 05 2021 In his classic *A Geography of Oysters*, Rowan Jacobsen forever changed the way America talks about its best bivalve. Now he does the same for our favorite fruit, showing us that there is indeed life beyond Red Delicious-and even Honeycrisp. While supermarkets limit their offerings to a few waxy options, apple trees with lives spanning human generations are producing characterful varieties-and now they are in the midst of a rediscovery. From heirlooms to new designer breeds, a delicious diversity of apples is out there for the eating. Apples have strong personalities, ranging from crabby to wholesome. The Black Oxford apple is actually purple, and looks like a plum. The Knobbed Russet looks like the love child of a toad and a potato. (But don't be fooled by its looks.) The D'Arcy Spice leaves a hint of allspice on the tongue. Cut Hidden Rose open and its inner secret is revealed. With more than 150 art-quality color photographs, *Apples of Uncommon Character* shows us the fruit in all its glory. Jacobsen collected specimens both common and rare from all over

North America, selecting 120 to feature, including the best varieties for eating, baking, and hard-cider making. Each is accompanied by a photograph, history, lore, and a list of characteristics. The book also includes 20 recipes, savory and sweet, resources for buying and growing, and a guide to the best apple festivals. It's a must-have for every foodie.

The apples are set against complementary brightly colored backdrops; they are peeled or unpeeled, cut or whole, skin shriveled or perfectly smooth and shiny. Mullan embraces each apple's idiosyncratic aesthetic qualities completely.

The Botany of Desire Jan 20 2020 "Pollan shines a light on our own nature as well as on our implication in the natural world." —The New York Times "A wry, informed pastoral." —The New Yorker The book that helped make Michael Pollan, the New York Times bestselling author of *How to Change Your Mind*, *Cooked* and *The Omnivore's Dilemma*, one of the most trusted food experts in America Every schoolchild learns about the mutually beneficial dance of honeybees and flowers: The bee collects nectar and pollen to make honey and, in the process, spreads the flowers' genes far and wide. In *The Botany of Desire*, Michael Pollan ingeniously demonstrates how people and domesticated plants have formed a similarly reciprocal relationship. He masterfully links four fundamental human desires—sweetness, beauty, intoxication, and control—with the plants that satisfy them: the apple, the tulip, marijuana, and the potato. In telling the stories of four familiar species, Pollan illustrates how the plants have evolved to satisfy humankind's most basic yearnings. And just as we've benefited from these plants, we have also

done well by them. So who is really domesticating whom?
