Encyclopedia of Educational Psychology Jun 17 2022 The field of educational psychology draws from a variety of diverse disciplines including human development across the life span, measurement and statistics, learning and motivation, and teaching. And within these different disciplines, many other fields are featured including psychology, anthropology, education, sociology, public health, school psychology, counseling, history, and philosophy. In fact, when taught at the college or university level, educational psychology is an ambitious course that undertakes the presentation of many different topics all tied together by the theme of how the individual can best function in an "educational" setting, loosely defined as anything from pre-school through adult education. Educational psychology can be defined as the application of what we know about learning and motivation, development, and measurement and statistics to educational settings (both school- and community-based).

The Yellow Wallpaper Illustrated Feb 01 2021 "The Yellow Wallpaper" is a short story by American writer Charlotte Perkins Gilman, first published in January 1892 in The New England Magazine.[1] It is regarded as an important early work of American feminist literature, due to its illustration of the attitudes towards mental and physical health of women in the 19th century. Narrated in the first person, the story is a collection of journal entries written by a woman whose physician husband (John) has rented an old mansion for the summer. Forgoing other rooms in the house, the couple moves into the upstairs nursery. As a form of treatment, the unnamed woman is forbidden from working, and is encouraged to eat well and get plenty of air, so she can recuperate from what he calls a "temporary nervous depression - a slight hysterical tendency", a diagnosis common to women during that period

[The Poetics of Ruins in Renaissance Literature](#) Apr 03 2021 The Renaissance was the Ruin-naissance, the birth of the ruin as a distinct category of cultural discourse, one that inspired voluminous poetic production. For humanists, the ruin became the material sign that marked the rupture between themselves and classical antiquity. In the first full-length book to document this cultural phenomenon, Andrew Hui explains how the invention of the ruin propelled poets into creating works that were self-aware of their absorption of the past as well as their own survival in the future.

[Losing It All to Sprawl](#) Dec 11 2021 As development threatens his very sense of place, an award-winning nature writer finds hope in the rediscovery and appreciation of his historic Cracker farmhouse. *Losing It All to Sprawl* is the poignant chronicle of award-winning nature writer Bill Belleville and how he came to understand and love his historic Cracker farmhouse and neighborhood in central Florida, even as it was all wiped out from under him. Belleville's narrative is eloquent, informed, and impassioned, a saga in which tractors and backhoes trample through the woods next to his home in order to build the backbone of Florida sprawl—the mall. As heavy machinery encircles Belleville and his community—the noise growing louder and closer, displacing everything Belleville has called home for the past fifteen years—he tells a story that is much older, 10,000 years older. The story stretches back to the Timucua and the Mayaca living in harmony with Florida's environment; the conquistadors who expected much from, but also feared, this land of flowers; the turn-of-the-century tourists modernizing and climatizing the state; the original Cracker families who lived in Belleville's farmhouse.

A Sense of Things Jul 26 2020 In May 1906, the Atlantic Monthly commented that Americans live not merely in an age of things, but under the tyranny of them, and that in our relentless effort to sell, purchase, and accumulate things, we do not possess them as much as they possess us. For Bill Brown, the tale of that possession is something stranger than the history of a culture of consumption. It is the story of Americans using things to think about themselves. Brown's captivating new study explores the roots of modern America's fascination with things and the problem that objects posed for American literature at the turn of the century. This was an era when the invention, production, distribution, and consumption of things suddenly came to define a national culture. Brown shows how crucial novels of the time made things not a solution to problems, but problems in their own right. Writers such as Mark Twain, Frank Norris, Sarah Orne Jewett, and Henry James ask why and how we use objects to make meaning, to make or remake ourselves, to organize our anxieties and affections, to sublimate our fears, and to shape our wildest dreams. Offering a remarkably new way to think about materialism, *A Sense of Things* will be essential reading for anyone interested in American literature and culture.

Consequences of Growing Up Poor Oct 29 2020 One in five American children now live in families with incomes below the povertyline, and their prospects are not bright. Low income is statistically linked with a variety of poor outcomes for children, from low birth weight and poor nutrition in infancy to increased chances of academic failure, emotional distress, and unwed childbirth in adolescence. To address these problems it is not enough to know that money makes a difference; we need to understand how. *Consequences of Growing Up Poor* is an extensive and illuminating examination of the paths through which economic deprivation damages children at all stages of their development. In *Consequences of Growing Up Poor*, developmental psychologists, economists, and sociologists revisit a large body of studies to answer specific questions about how low income puts children at risk intellectually, emotionally, and physically. Many of their investigations demonstrate that although income clearly creates disadvantages, it does so selectively and in a wide variety of ways. Low-income preschoolers exhibit poorer cognitive and verbal skills because they are generally exposed to fewer toys, books, and other stimulating experiences in the home. Poor parents also tend to rely on home-based child care, where the quality and amount of attention children receive is inferior to that of professional facilities. In later years, conflict between economically stressed parents increases anxiety and weakens self-esteem in their teenaged children. Although they share economic hardships, the home lives of poor children are not homogenous. *Consequences of Growing Up Poor* investigates whether such family conditions as the marital status, education, and involvement of parents mitigate the ill effects of poverty. *Consequences of Growing Up Poor* also looks at the importance of timing: Does being poor have a different impact on preschoolers, children, and adolescents? When are children most vulnerable to poverty? Some contributors find that poverty in the prenatal or early childhood years appears

to be particularly detrimental to cognitive development and physical health. Others offer evidence that lower income has a stronger negative effect during adolescence than in childhood or adulthood. Based on their findings, the editors and contributors to *Consequences of Growing Up Poor* recommend more sharply focused child welfare policies targeted to specific eras and conditions of poor children's lives. They also weigh the relative need for income supplements, child care subsidies, and home interventions. *Consequences of Growing Up Poor* describes the extent and causes of hardships for poor children, defines the interaction between income and family, and offers solutions to improve young lives. JEANNE BROOKS-GUNN is Virginia and Leonard Marx Professor of Child Development at Teachers College, Columbia University. She is also director of the Center for Young Children and Families, and co-directs the Adolescent Study Program at Teachers College.

Doctor Mary in Arabia Apr 15 2022 Until fairly recently, Arab women rarely received professional health care, since few women doctors had ever practiced in Arabia and their culture forbade them from consulting male doctors. Not surprisingly, Dr. Mary Bruins Allison faced an overwhelming demand when she arrived in Kuwait in 1934 as a medical missionary of the Reformed Church of America. Over the next forty years, "Dr. Mary" treated thousands of women and children, faithfully performing the duties that seemed required of her as a Christian—to heal the sick and seek converts. These memoirs record a fascinating life. Dr. Allison briefly describes her upbringing and her professional training at Women's Medical College of Pennsylvania. She then focuses on her experiences in Kuwait, where women of all classes, including royalty, flocked to her care. In addition to describing many of her cases, Dr. Allison paints a richly detailed picture of life in Kuwait both before and after the discovery of oil transformed the country. Her recollections include invaluable details of women's lives in the Middle East during the early and mid-twentieth century. They add a valuable chapter to the story of modern medicine, to the largely unsuccessful efforts of the Christian church to win converts in the Middle East, and to the opportunities and limitations that faced American women of the period. Dr. Allison also worked briefly in Bahrain, Qatar, Oman, and India, and she includes material on each country. The introduction situates her experiences in the context of Middle Eastern and medical developments of the period.

Results Now Jun 05 2021 According to author Mike Schmoker, there is a yawning gap between the most well-known essential practices and the reality of most classrooms. This gap persists despite the hard, often heroic work done by many teachers and administrators. Schmoker believes that teachers and administrators may know what the best practices are, but they aren't using them or reinforcing them consistently. He asserts that our schools are protected by a buffer--a protective barrier that prevents scrutiny of instruction by outsiders. The buffer exists within the school as well. Teachers often know only what is going on in their classrooms--and they may be completely in the dark about what other teachers in the school are doing. Even principals, says Schmoker, don't have a clear view of the daily practices of teaching and learning in their schools. Schmoker suggests that we need to get beyond this buffer to confront the truth about what is happening in classrooms, and to allow teachers to learn from each other and to be supervised properly. He

outlines a plan that focuses on the importance of consistent curriculum, authentic literacy education, and professional learning communities for teachers. What will students get out of this new approach? Learning for life. Schmoker argues passionately that students become learners for life when they have more opportunities to engage in strategic reading, writing with explicit guidance, and argument and discussion. Through strong teamwork, true leadership, and authentic learning, schools and their students can reach new heights. Results Now is a rally cry for educators to focus on what counts. If they do, Schmoker promises, the entire school community can count on unprecedented achievements.

Following a brief account of the historical relationship between structuralism and poststructuralism, this Very Short Introduction traces the key arguments that have led poststructuralists to challenge traditional theories of language and culture. Whilst the author discusses such well-known figures as Barthes, Foucault, Derrida, and Lacan, she also draws pertinent examples from literature, art, film, and popular culture, unfolding the poststructuralist account of what it means to be a human being. Our expert authors combine facts, analysis, perspective, new ideas, and enthusiasm to make interesting and challenging topics highly readable.

Revitalizing Undergraduate Science Oct 09 2021 This book explains why so few efforts at reforming science education are successful, and why it is that the 300 studies on the subject published over the past decade have done little more than add to a growing body of literature. The book describes programs which are successful in terms of faculty accomplishments, students graduated and entering advanced study or professional workplace, and showing evidence of high morale among both faculty and undergraduates. Common elements in many of these programs are abandonment of an almost exclusive emphasis on problem solving and modification of the lecture format to permit teaching of underlying concepts. Other variations in traditional introductory physics and chemistry courses are aimed at persuading those simply

fulfilling graduation requirements to major in science; at bringing minority students into the fold; or at combining physics or various sub-fields of chemistry in different ways to promote better understanding. Harvard's "chem-phys," is provided as an example of such a combination, but also as a case study of how innovation can be stymied by a lack of university-wide change. The author uses methods of ethnography in reporting what makes individual programs interesting, what their faculty are doing, and what program participants are thinking. (PR)
