Investigates charges that Senator Joe McCarthy, Chairman of Senate Permanent Subcommittee on Investigations, and Subcommittee counsel Roy M. Cohn sought preferential treatment from Army for former Subcommittee consultant, Private G. David Schine. Also investigates countercharges that Secretary of Army Robert T. Stevens and others brought these charges to

discredit the Subcommittee investigation of communist infiltration of the Army. Wittgenstein is one of the most important and influential twentieth-century philosophers in the western tradition. In his Philosophical Investigations he undertakes a radical critique of analytical philosophy's approach to both the philosophy of language and the philosophy of mind. The Routledge Guidebook to Wittgenstein's Philosophical Investigations introduces and assesses: Wittgenstein's life The principal ideas of the Philosophical Investigations Some of the principal disputes concerning the interpretation of his work Wittgenstein's philosophical method and its connection with the form of the text. With further reading included throughout, this guidebook is essential reading for all students of philosophy, and all those wishing to get to grips with this masterpiece. Investigates WWII massacre of American soldiers at Malmedy, Belgium, and investigates allegations German soldiers confessed to the crimes under duress. Includes annual summary and 11 supplements. Investigates possible relationship between alleged improper practices and bank failures, and discusses adequacy of existing laws to provide proper supervision and control of banking activities. "For those who care about justice, and especially those who want to do something about injustice, Paul Ciolino's In the Company of Giants is a must-read."--Rob Warden, Executive Director, Innocence Project, Northwestern University School of Law "Paul Ciolino is old school. Right is right and wrong is wrong. With street smarts and a sixth sense for where to look, Ciolino won't let go until he's found what he's looking for, which is quite simply justice. And now he's written a highly readable, straight-ahead, tell-it-like-it-is guide to let us in on what he knows."--Alex Kotlowitz, Author of There Are No Children Here, Never a City So Real, and The Other Side of the River Herein lies the root of the issue. Justice, morality, and freedom. This is what our fight is about. This is what it boils down to for me and I hope for you as well. Money is nice. Professional recognition by our peers is great. Warm and fuzzy media stories about our quest for justice are ego enriching. But, at the end of the day, it is about our most basic and dearest God inspired constitutional rights as Americans. This is what the wrongful conviction case is about, and this is why we find ourselves doing this work. Investigates DOD contract policies for F-111 tactical fighter experimental (TFX) program. With the blinding speed at which the •gSmartphone Age•h came upon the investigative profession, asset investigation remains putting together a puzzle from the multiple pieces: public records, online evidence, news accounts, print documents, and human sources. Emphasizing the importance of public records and the resources of the Internet, this fifth edition concentrates on research techniques. These methods make considerable use of websites, libraries, periodicals, and government documents with a constant theme of correlating data from different open sources. This new edition remains the predominant primer on how to find assets to satisfy judgments and debts, but it now also includes significant focus on the emerging underground economy and the •gshadow•h financial domain. The text explores the connections between stolen credit card information, the gambling sector, money laundering, and the role a subject may play in a larger criminal enterprise. The book also addresses organized crime•fs impact on the Internet and financial transactions in cyberspace, as well as

the impact of portable digital devices on civil and criminal investigations and the new challenges for investigators working through the electric labyrinth, including the Deep Web and the Dark Web. This edition also includes a very helpful glossary that defines terms introduced throughout the text and an appendix that provides a checklist for traditional and nontraditional asset investigations. This fifth edition seeks to provide an essential understanding of the digital forensics and mobile digital technologies as it steers private investigators, collections specialists, judgment professionals, and asset recovery specialists in undertaking legal information collection in a most challenging age. Not everything you see on your favorite crime show is accurate. In fact, a lot of it is flat out wrong. Stevens and others brought these charges to discredit the Subcommittee investigation of communist infiltration of the Army. The majority of people can expect to experience neck pain in their lifetime and some will go on to develop prolonged or repetitive episodes of neck pain or related symptoms. These persistent complaints have become a major cause of disability around the world. Although chronic 'mechanical' neck pain can be defined in clinical terms, the underlying pathology remains unclear. Research has failed to demonstrate a consistent relationship between the presence of neck pain and pathology such as degenerative changes. As such, there has been an increasing interest in altered neuro-muscular-articular function in the pathogenesis of neck pain. Over the last 17 years, the role of cervical proprioceptive (mechanoreceptive) dysfunction in the perpetuation of chronic neck pain has received increasing attention from researchers and clinicians. This is commonly referred to as cervicocephalic kinaesthetic sensibility (KS). Cervicocephalic KS has generally been studied utilising head repositioning accuracy (HRA) tasks. At the beginning of this study only seven reports had been published in the area. Following review of this literature, several focused areas of interest were apparent for further study - 1) comparison of KS in various patient subgroups (e.g., insidious onset vs 'whiplash'); 2) development of more sophisticated methods of

measuring head movement and repositioning errors; 3) establishing the characteristics of the tests such as method agreement and reliability; 4) comparison of the discriminative value of repositioning tasks to both subjective 'straight ahead' (SSA) and to non-neutral set points within the cervical range of motion (non-straight ahead or nSA). Investigation 1 used a laser pointer method to study head repositioning errors in patients with chronic neck pain of insidious onset. The results suggested that these patients with chronic neck pain show little evidence of impaired cervicocephalic KS, when measured as HRA-SSA. The study also served to highlight several difficulties with the laser pointer method of measurement and the relatively poor knowledge of HRA in healthy subjects. Most previous studies used the mean of 10 repetitions for the measurement but more recent studies utilised fewer repetitions. Although the laser pointer method is simple, inexpensive and easy to use, the method involves a degree of experimenter bias and inaccuracy. It also does not lend itself to concurrent evaluation of variables such as range of motion and speed of head movement. Investigations 2 & 3 focused on the development of the testing method and the introduction of the Zebris CMS 70P ultrasound system for the recording of HRA-SSA, namely; method agreement between a 5 and 10 repetition measuring protocol; method agreement between the laser pointer and Zebris system; the intra/inter-examiner reliability of measurement methods. The Zebris system results suggested that the two methods of measurement agree sufficiently well for the 5 repetition method to replace the 10 repetition method to obtain a mean HRA score and that both could be used interchangeably. Further results suggested that the Zebris and laser pointer methods do not agree sufficiently well to be used interchangeably. The test-retest reliability was comparable between both methods suggesting that from this perspective, either could be used for measuring HRA-SSA. The inter-rater test-retest reliability was comparable to the test-retest reliability suggesting that trained examiners could be interchanged when carrying out repeated measurements. Investigation 4, the final study in this thesis, investigated HRA with the Zebris system using the 5 repetition protocol in two groups of chronic neck pain patients; insidious onset and neck pain from a 'whiplash' injury. The results suggested that patients with chronic neck pain of both insidious onset and from a 'whiplash' injury show little evidence of impaired cervicocephalic KS when measured using HRASSA and nSA tests. These results conflict with previous studies. Despite numerous investigations over the last 17 years, a test that can be routinely applied in the clinical setting for the purposes of diagnosis and treatment monitoring has not been established. Studies to date suggest that an active HRA test to SSA/NHP that is established by the patient may have the greatest discriminative value. Although HRA testing shows some promise in identifying deficits in 'whiplash' patients, it is unlikely that the KS tests identify specific subgroups of chronic neck pain patients. There have been several contradictory studies which have shown considerable overlap between patient and healthy groups. It is also unlikely that HRA tests represent a unique test of cervical proprioceptive function (peripheral or central integration) and therefore provide a test exclusive to neck disorders. Cerebral Lateralization and Cognition: Evolutionary and Developmental Investigations of Motor Biases, Volume 238, the latest release in the Progress in Brain

Research series, discusses interdisciplinary research on the influence of cerebral lateralization on cognition within an evolutionary framework. Chapters of note in this release include Evolutionary Perspectives: Visual/Motor Biases and Cognition, Manual laterality and cognition through evolution: An archeological perspective, Laterality in insects, Motor asymmetries in fish, amphibians and reptiles, Visual biases and social cognition in animals, Mother and offspring lateralized social interaction across animal species, Manual bias, personality and cognition in common marmosets and other primates, and more. Presents investigations of cognitive development in an evolutionary framework Provides a better understanding of the causal relationship between motor function and brain organization Brings clinicians and neuroscientists together to consider the relevance of motor biases as behavioral biomarkers of cognitive disorders Includes future possibilities for early detection and motor intervention therapies

Throughout the history of law enforcement, the internal investigation process has held the most negative connotation of any investigation conducted by law enforcement personnel. As we progress through the new millennium, the need for efficient and effective law enforcement services and practices grows ever more critical. The goal of this book is to demonstrate this need for proper and complete internal investigations, and to teach the entry level and tenured police supervisor the form and function of the internal investigations process. The text selectively focuses on the purposes and practical implications of internal investigations and the pitfalls. The goal is to guide students and professionals through definitions, terminology, legal and labor issues, case law, techniques and procedures, critical and special investigations, including issues in administrative and civil claims. The reader will find a model for conducting internal investigations of police personnel that will allow a police supervisor or commander to perform investigations in a thorough, ethical, legal, and equitable manner. This book will meet the needs of attorneys who litigate cases involving allegations of police misconduct as well as representatives of collective bargaining groups who represent police personnel in similar actions. The text ends with the offering of evidence identification, evaluation and collection, case review processes, risk management, training and managing internal investigators, and the future trends in internal investigations. The aim of this book is to be as practical as possible. It is not a law book, though we confidently hope that it will be of the greatest interest to lawyers. It is not a work on medical jurisprudence, though we trust that medical men will find it useful and suggestive. It is a Manual of Instruction for all engaged in investigating crime. The book, following the author's arrangement, has been divided into four parts. Part I. is designed, in the first place, to enunciate those general principles and qualities, the lack or neglect of which proclaim an investigator unfitted for the sphere in life in which it is his misfortune to be placed ; and, in the second place, to inform him in a general way what assistance science can afford in the investigation of crime, and in a more detailed manner to show in just what cases expert knowledge may be effectively brought to bear. Advice is also given regarding the examination of witnesses and accused and the inspection of localities. Parts II. and III. deal respectively with various heads of knowledge and certain

handicrafts with which every Investigating Officer should be thoroughly well acquainted ; while Part IV. gives information upon the methods of criminals in committing particular offences, much of which may be new even to experienced detectives. (1906 - The Authors) A Kirkus Reviews Best Book of the Year The Investigator, a humble and ordinary man, has been ordered to conduct an Investigation into a series of suicides that have taken place at the Enterprise—a huge, sprawling complex in an unnamed Town. But the Investigator's train is delayed. When he finally arrives, no one is there to meet him at the station. When he reaches the Enterprise, he is denied entrance. The harder the Investigator tries to fulfill his task, the more senseless obstacles he encounters: regulations hamstringing him, street layouts befuddle him, and—perhaps most unnervingly—he senses someone watching and recording his every movement. In this highly original and absorbing work, Claudel turns his masterful storytelling toward a sweeping critique of the contemporary world. Like Kafka, Beckett, and Huxley, Claudel's dark fable shows that the most looming questions of our time can only be countered with piercing intelligence and considerable humor.
