This established entry-level hematology text enters its Fourth Edition with even more of the focused coverage and learning tools that have made it so successful. Well-illustrated and reader-friendly, the book features extensive study and review tools, including learning objectives, case studies, procedure boxes, and review questions. The fully updated Fourth Edition includes new material on safety issues, transplants, sickle cell anemia, and genetic diagnostics. New chapters address flow cytometry, cytochemistry, and hemostasis and coagulation. Chapter summaries have been boxed for rapid reference, and this edition includes an expanded 16-page color insert. (Midwest). Features of the valid nominal species of *Aprionodon* Gill (*isodon* Valenciennes) and *Hypoprion* Müller and Henle (*hemiodon* Valenciennes, *macloti* Müller and Henle, and *signatus* Poey), plus those of a previously unrecognized species here described as *Carcharhinus leiodon* n.sp., are examined and compared with those of *Carcharhinus* Blainville. Features studied include morphometrics, vertebral numbers and other vertebral characteristics, tooth numbers, color pattern, and some other aspects of external morphology. It is concluded that on these features *C. Leiodon* n.sp. is entirely encompassed within the parameters of *Carcharhinus*, and that, although *A. isodon*, *H. hemiodon*, *H. macloti*, and *H. signatus* each extend the range of diversity of *Carcharhinus* in one or more features, *A. isodon* is not uniquely different from *Carcharhinus*, and there is no common pattern of difference between

the three species of Hypoprion and Carcharhinus. Accordingly, and because the nature of the teeth of Aprionodon and Hypoprion has been found insufficient to warrant generic distinction from Carcharhinus, the genera Aprionodon and Hypoprion are synonymised with Carcharhinus. A diagnosis and description are given for each of the above species. The descriptions include measurements, counts, and line illustrations that show the whole shark in lateral view, underside of head, nostril, and teeth. The geographic distribution is summarized, as are also the meager biological data available on number of embryos, size at birth, size at sexual maturity, and maximum size.

Methods for Studying Mononuclear Phagocytes is a practical guide to the study of mononuclear phagocytes that brings together various well-established and useful methods for examining these cells. The technical protocols have been made detailed, specific, practical, and inclusive of the necessary mystique for immediate and direct application in the laboratory. The book is divided into 11 parts arranged according to the sequence of steps that would generally be followed to study a given population of mononuclear phagocytes: (I) methods for obtaining and culturing populations of human and animal mononuclear phagocytes; (II) methods for separating populations of leukocytes to enrich or deplete their content of mononuclear phagocytes; (III) criteria and techniques for identifying mononuclear phagocytes; (IV) methods for quantifying the number of mononuclear phagocytes; (V) techniques for studying the morphology of mononuclear phagocytes; (VI) methods for quantifying the biochemical constituents of mononuclear phagocytes; (VII) methods of quantifying phagocytosis, pinocytosis, and chemotaxis; (VIII) methods for quantifying the secretory products of mononuclear phagocytes; (IX) procedures for quantifying the destruction of tumor

cells and of microorganisms by mononuclear phagocytes; (X) methods for studying the cell biology of mononuclear phagocytes; and (XI) techniques for studying mononuclear phagocytes in vivo, including procedures for estimating their kinetics, accumulation, identification, and microbicidal properties. **BASIC CLINICAL LABORATORY TECHNIQUES**, Sixth Edition teaches prospective laboratory workers and allied health care professionals the basics of clinical laboratory procedures and the theories behind them. Longing for a kinder, gentler world? As the old saying goes, everything begins at home, and odds are, if you live in the all-American household, the air inside is more toxic than the air outside, even if you live in the most polluted of cities. You regularly handle the filthiest object in your home -- the kitchen sponge -- and put the same chemicals on your face that are used in brake fluid and antifreeze. The cleaning agents and personal care products commonly marketed to and used in American homes contain not only some very dangerous, toxic chemicals, but they also create an "overly clean," chemically bombed-out house that compromises immune systems. And with more than fifty million Americans suffering from allergies and other autoimmune diseases -- not to mention the developing and fragile immune systems of children and seniors -- large numbers of people are actually being made sicker and sicker by their homes. Learn to live a clean, healthy, more economical way with Ellen Sandbeck, the nontoxic avenger. In

this must-have book for the twenty-first-century home, this passionate, witty advocate of all things organic will teach you how to maintain every part of the home -- from living room to septic tank, kitchen floor to bathroom sink -- using safe, simple cleansers and quick preventative measures as well as the most effective organic products on the market to get the job done. Learn time-saving, preventative housekeeping, such as taking thirty seconds to clean the shower while you shower. Take care of bathroom stains with baking soda and vinegar rather than commercial, toxic bathroom "bombs" peddled to you with such force by manufacturers. Need whiter whites? There is no bleaching power on earth stronger than the sun. Snow clean your fine rugs. Choose fruits and vegetables from the relatively pesticide residue-free list. Clean felt-tipped pen stains with vodka. Make furniture shine with olive oil and lemon. Your house will also smell as great as it looks. Providing hands-on advice for the conservator, *Architectural Tiles: Conservation and Restoration* is a unique and valuable guide. Topics covered offer practical guidance on conservation and restoration techniques including the problems of manufacture, cleaning, replacement or repair and mortars. Techniques are illustrated by comprehensive case studies, against a background of the role of past architects and designers in historic schemes.
