Watershed Research in Eastern North America Oct 10 2021

Regolith Science Aug 08 2021 This comprehensive reference on the fundamentals of regolith geoscience describes how regolith is developed from parental rocks and emphasises the importance of chemical, physical, water and biological processes in regolith formation. It provides details for mapping regolith landforms, as well as objective information on applications in mineral exploration and natural resource management. Regolith Science also provides a concise history of weathering through time in Australia. It includes previously unpublished information on elemental abundances in regolith materials along with detailed information on soil degradation processes such as acid sulfate soils. Written by experts in the field, Regolith Science summarises research carried out over a 13-year period within the Cooperative Research Centre for Landscape Environments and Mineral Exploration. This book will be a valuable resource for scientists and graduate/postgraduate students in geology, geography and soil science, professionals in the exploration industry and natural resources management. This paperback edition is a reprint of the original hardback published in October 2008.

Conceptual Models in Exploration Geochemistry Oct 22 2022 Conceptual Models in Exploration Geochemistry

Heavy Metals in Soils Aug 20 2022 Heavy metals in soils continue to receive increasing attention due to the growing scientific and public awareness of environmental issues and the development of analytical techniques to measure their concentrations accurately. Building on the success and acclaim of the first edition, this book continues to provide an up-to-date, balanced and comprehensive review of the subject in two sections: the first providing an introduction to the metals chemistry, sources and methods used for their analysis; and the second containing chapters dealing with individual elements in detail.

Practical Geochemistry Apr 16 2022 This book is a marked departure from typical introductory geochemistry books available: It provides a simple, straightforward, applied, and down-to-earth no-nonsense introduction to geochemistry. It is for the undergraduate students who are introduced to the subject for the first time, but also for practicing geologists who do not need the heavy-duty theory, but some clear, simple, and useful practical tips and pointers. This book, written from the point of view of a practicing geologist, introduces the fundamental and most relevant principles of geochemistry, explaining them whenever possible in plain terms. Crucially, this textbook covers – in a single volume! – practical and useful topics that other introductory geochemistry books ignore, such as sampling and sample treatment, analytical geochemistry, data treatment and geostatistics, classification and discrimination diagrams, geochemical exploration, and environmental geochemistry. The main strengths of this book are the breadth of useful and practical topics, the straightforward and approachable way in which it is written, the numerous real-world and specific geological examples, and the exercises and review questions (using real-world data and providing on-line answers). It is therefore easily understood by the beginner geochemist or any geologist who desires to use geochemistry in their daily work.

Environmental Protection and Sustainable Development Jun 25 2020 Collection of selected, peer reviewed papers from the 2013 2nd International Conference on Sustainable Energy and Environmental Engineering (ICSEEE 2013), 28-29 December, 2013, Shenzhen, China. The 363 papers are grouped as follows: Chapter 1: Environmental Analysis, Monitoring and Pollution Control Project, Chapter 2: Environmental Chemistry and Biological Researches, Chapter 3: Environmental Safety and Health, Chapter 4: Environmental Restoration and Purification Engineering, Chapter 5: Ecological and Environmental Protection, Chapter 6: Waste Disposal and Recycling, Chapter 7: Disaster Prevention and Mitigation, Chapter 8: Hydrology, Water Resources Engineering and Water Supply, Chapter 9: Forest Cultivation and Plant Protection, Chapter 10: Biomedical Engineering, Chapter 11: Geographic Information Science and Remote Sensing, Chapter 12: Geology and Geoscience, Prospecting and Exploration of Mineral Resources, Chapter 13: Mining Engineering, Chapter 14: Technologies of Mineral Processing, Chapter 15: Technology of Oil and Gas Extraction, Chapter 16: Urban and Rural Planning and Design, Chapter 17: Sustainable Development, Circular and Low-Carbon Economy

Mine Wastes Sep 21 2022 This book is not designed to be an exhaustive work on mine wastes. It aims to serve undergraduate students who wish to gain an overview and an understanding of wastes produced in the mineral industry. An introductory textbook addressing the science of such wastes is not available to students despite the importance of the mineral industry as a resource, wealth and job provider. Also, the growing importance of the topics mine wastes, mine site pollution and mine site rehabilitation in universities, research organizations and industry requires a textbook suitable for undergraduate students. Until recently, undergraduate earth science courses tended to follow rather classical lines, focused on the teaching of palaeontology, crystallography, mineralogy, petrology, stratigraphy, sedimentology, structural geology, and ore deposit geology. However, today and in the future, earth science teachers and students also need to be familiar with other subject areas. In particular, earth science curriculums need to address land and water degradation as well as rehabilitation issues. These topics are becoming more important to society, and an increasing number of earth science students are pursuing career paths in this sector. Mine site rehabilitation and mine waste science are examples of newly emerging disciplines. This book has arisen out of teaching mine waste science to undergraduate and graduate science students and the frustration at having no appropriate text which documents the scientific fundamentals of such wastes.

Directory of the Geologic Division, U.S. Geological Survey Jan 13 2022

La contaminación del suelo: una realidad oculta Feb 20 2020 Este documento presenta los mensajes clave y el estado actual de la contaminación del suelo, así como sus implicaciones para la seguridad alimentaria y la salud humana. Su objetivo es sentar las bases para un nuevo debate durante el próximo Simposio Mundial sobre la Contaminación del Suelo (GSOP18), que se celebrará en la sede de la FAO del 2 al 4 de mayo de 2018. La publicación ha sido revisada por el Grupo Técnico Intergubernamental sobre el Suelo (GTIS) y por autores colaboradores. Aborda las evidencias científicas sobre la contaminación del suelo y destaca la necesidad de evaluar el alcance de la contaminación del suelo a nivel mundial a fin de lograr la seguridad alimentaria y el desarrollo sostenible. Esto está relacionado con los objetivos estratégicos de la FAO, especialmente el SO1, el SO2, el SO4 y el SO5, debido al papel crucial que desempeñan los suelos para garantizar un ciclo eficaz de nutrientes que permita producir alimentos nutritivos e inoocuos, reducir las concentraciones de CO2 y N2O en la atmósfera y, por lo tanto, mitigar el cambio climático, desarrollar prácticas sostenibles de gestión del suelo que aumenten la resiliencia de la agricultura a los fenómenos climáticos extremos mediante la reducción de los procesos de degradación del suelo.

World Directory of Crystallographers Oct 18 2019 A brief historical account of the background leading to the publication of the first four editions of the World Directory of Crystallographers was presented by G. Boom in his preface to the Fourth Edition, published late in 1971. That edition was produced by traditional typesetting methods from compilations of biographical data prepared by national Sub-Editors. The major effort required to produce a directory by manual methods provided the impetus to use computer techniques for the Fifth Edition. The account of the production of the first computer assisted Directory was described by S.C. Abrahams in the preface of the Fifth Edition. Computer composition, which required a machine readable data base, offered several major advantages. The choice of typeface and range of characters was flexible. Corrections and additions to the data base were rapid and, once established, it was hoped updating for future editions would be simple and inexpensive. The data base was put to other Union uses, such as preparation of mailing labels and formulation of lists of crystallographers with specified common fields of interest. The Fifth Edition of the World Directory of Crystallographers was published in June of 1977, the Sixth in May of 1981. The Subject Indexes for the Fifth and Sixth Editions were printed in 1978 and 1981 respectively, both having a limited distribution.

Algae and Cyanobacteria in Extreme Environments Mar 23 2020 This collection of essays is devoted to algae that are unexpectedly found in harsh habitats. The authors explain how these algae thrive in various temperature ranges, extreme pH values, salt solutions, UV radiation, dryness, heavy metals, anaerobic niches, various levels of illumination, and hydrostatic pressure. Not only do the essays provide clues about life on the edges of the Earth, but possibly elsewhere in the universe as well.

Non-Marine Organic Geochemistry Mar 15 2022 The author outlines the geologically important organic compounds, their reactions, and the fundamental analytical methods used in organic chemistry.

Mine Wastes May 17 2022 This book provides comprehensive, up-to-date overview of the accumulation of wastes at mine, including sulfidic mine wastes, mine water, tailings, cyanidation wastes of gold-silver ores, radioactive wastes of uranium ores, and wastes of phosphate and potash ores. The updated second edition includes new case studies; presents crucial aspects of mine wastes as scientific issues; reflects major developments and contemporary issues in mine waste science; additional figures; and an updated reference list.

Mine Closure Mar 03 2021

Guidelines for Surveying Soil and Land Resources Jul 07 2021 Guidelines for Surveying Soil and Land Resources promotes the development and implementation of consistent methods and standards for conducting soil and land resource surveys in Australia. These surveys are primarily field operations that aim to identify, describe, map and evaluate the various kinds of soil or land resources in specific areas. The advent of geographic information systems, global positioning systems, airborne gamma radiometric remote sensing, digital terrain analysis, simulation modelling, efficient statistical analysis and internet-based delivery of information has dramatically changed the scene in the past two decades. As successor to the Australian Soil and Land Survey Handbook: Guidelines for Conducting Surveys, this authoritative guide incorporates these new methods and techniques for supporting natural resource management. Soil and land resource surveyors, engineering and environmental consultants, commissioners of surveys and funding agencies will benefit from the practical information provided on how best to use the new technologies that have been developed, as will professionals in the spatial sciences such as geomorphology, ecology and hydrology.

Report of Activities ... Resident Geologists Feb 02 2021

Geochemistry of Rocks and Related Soils and Vegetation in the Yellow Cat Area, Grand County, Utah Feb 26 2023 Prepared on behalf of the U.S. Atomic Energy Commission.

Biophysico-Chemical Processes of Heavy Metals and Metalloids in Soil Environments Jul 19 2022 Written by a multidisciplinary group of soil and environmental scientists, Biophysico-Chemical Processes of Heavy Metals and Metalloids in Soil Environments provides the scientific community with a critical qualitative and quantitative review of the fundamentals of the processes of pollutants in soil environments. The book covers pollutants' speciation, mobility, bioavailability and toxicity, and impacts on development of innovative restoration strategies. In addition, the development of innovative remediation strategies for polluted soils is covered.

CIM Bulletin Apr 04 2021

Soil pollution: a hidden reality Jan 25 2023 This document presents key messages and the state-of-the-art of soil pollution, its implications on food safety and human health. It aims to set the basis for further discussion during the forthcoming Global Symposium on Soil Pollution (GSOP18), to be held at FAO HQ from May 2nd to 4th 2018. The publication has been reviewed by the Intergovernmental Technical Panel on Soil (ITPS) and contributing authors. It addresses scientific evidences on soil pollution and highlights the need to assess the extent of soil pollution globally in order to achieve food safety and sustainable development. This is linked to FAO's strategic objectives, especially SO1, SO2, SO4 and SO5 because of the crucial role of soils to ensure effective nutrient cycling to produce nutritious and safe food, reduce atmospheric CO2 and N2O concentrations and thus mitigate climate change, develop sustainable soil management practices that enhance agricultural resilience to extreme climate events by reducing soil degradation processes. This document will be a reference material for those interested in learning more about sources and effects of soil pollution.

Geographic Index to Published Reports and Maps, Mines and Minerals Division 1891 to 1993 Jan 01 2021 This index provides a listing, organized by geographic area, of serial publications of the Mines and Minerals Divisions and its predecessor organizations from 1891-1993. Only publications pertaining to specific geographic regions are included. Publications are indexed by geographic areas, including National Topographic System (NTS) areas, geographic townships, and Ministry of Natural Resources areas. Each index includes publications within a specific range of map scales so that publications are indexed by geographic areas of about the same size as the map or report area. Appendices provide listings of digital data, maps, and reports.

Conceptual Models in Exploration Geochemistry, 4 May 05 2021

Handbook of Metal-Microbe Interactions and Bioremediation Apr 23 2020 Around the World, metal pollution is a major problem. Conventional practices of toxic metal removal can be ineffective and/or expensive, delaying and exacerbating the crisis. Those communities dealing with contamination must be aware of the fundamental advances of microbe-mediated metal removal practices because these methods can be easily used and require less remedial intervention. This book describes innovations and efficient applications for metal bioremediation for environments polluted by metal contaminants.

Regolith Geology and Geomorphology May 25 2020 Providing fundamental discussion of regolith properties and chemistry, this book considers many landscape situations and features, whilst linking process to position, geochemistry and time. Presenting information from an Australian perspective it provides new insights into the subject, which are developed away from the yoke of traditional Northern Hemisphere ideas and concepts. * Presents a new approach to the problems of understanding regolith geology and landscapes * Presents the general aspects and principles of regolith * Chapters present views on landscapes and their evolution, the nature of minerals, the behaviour of water at a landscape level and the exploration of water behaviour at various scales in regolith materials * Investigates methods of conveying information about regolith via maps and in GIS packages

Soils Dec 24 2022 This expanded, fully updated second edition of the leading textbook in pedology and soil geomorphology is invaluable for anyone studying soils, landforms and landscape change.
