*Applications of Biological Anthropology to Human Affairs* Apr 20 2020 The unique contribution made by biological anthropology to human welfare lies in the fundamental understanding it can provide of the dynamic interrelationships between physical and social factors. By understanding these patterns, we can interpret the significance of variation in such measures of human well-being in terms of the incidence of disease and mortality rates. Topics covered in this book include reproductive ecology and fertility, nutritional status in relation to health, and the effects of pollution on individual growth. In later chapters, the concepts of physiological adaptation and Darwinian fitness and their relation to individual physical fitness are explored.

**Trends in Biological Anthropology 1** Jan 30 2021 This first volume in the series Trends in Biological Anthropology presents 11 papers. The study of modern baboons as proxies to understand extinct hominin species' diet and the interpretation of skeletal degenerative joint disease on the skeletal remains of extant primates are presented as case studies using methods and standards usually applied to human remains. The methodological theme continues with an assessment of the implications for interpretation of different methods used to record Linear Enamel Hypoplasia (LEH) and on the use and interpretation of three dimensional modeling to generate pictures of the content of collective graves. Three case studies on palaeopathology are presented. First is the analysis of a 5th–16th century skeletal collection from the Isle of May compared with one from medieval Scotland in an attempt to ascertain whether the former benefitted from a healing tradition. Study of a cranium found at Verbeke Cave, western Ukraine, provides a means to understand interpersonal interactions and burial ritual during the Trypillian culture. A series of skulls from Belgrade, Serbia, displays evidence for beheading. Two papers focus on the analysis disarticulated human remains at the Worcester Royal Infirmary and on Thomas Henry Huxley's early attempt to identify a specific individual through analysis of skeletal remains. The concept and definition of 'perimortem' particularly within a Forensic Anthropology context are examined and the final paper presents a collaborative effort between historians, archaeologists, museum officers, medieval re-enactors and food scientists to encourage healthy eating among present day Britons by presenting the ill effects of certain dietary habits on the human skeleton.

**The Alternative Introduction to Biological Anthropology** Feb 11 2022 In *The Alternative Introduction to Biological Anthropology*, author Jon Marks presents an innovative framework for thinking about the major issues in the field with fourteen original essays designed to correlate to the core chapters in standard textbooks. Each chapter draws on and complements—but does not reconstitute (except for the sake of clarity)—the major data and ideas presented in standard texts. Marks explores such topics as how we make sense of data about our origins, where our modern ideas come from, our inability to separate natural facts from cultural facts and values as we try to understand ourselves, and the social and political aspects of science as a culturally situated mental activity. Features \* Offers clear, intelligent, and completely original discussions—injected with a sense of humor—that will keep students reading \* Addresses core topics in a way that does not simply mirror what is in the basic textbooks but offers a new spin, thereby fostering critical thinking \* Complements traditional textbooks in biological anthropology and explores connections between biological and general anthropology \* Provides expert integration of topics, coherent narratives, and salient examples \* Utilizes theme statements at the start of each chapter that introduce the breadth of information covered and engage students in the material

**New Directions in Biocultural Anthropology** Mar 20 2020 Biocultural or biosocial anthropology is a research approach that views biology and culture as dialectically and inextricably intertwined, explicitly emphasizing the dynamic interaction between humans and their larger social, cultural, and physical environments. The biocultural approach emerged in anthropology in the 1960s, matured in the 1980s, and is now one of the dominant paradigms in anthropology, particularly within biological anthropology. This volume gathers contributions from the top scholars in biocultural anthropology focusing on six of the most influential, productive, and important areas of research within biocultural anthropology. These are: critical and synthetic approaches within biocultural anthropology; biocultural approaches to identity, including race and racism; health, diet, and nutrition; infectious disease from antiquity to the modern era; epidemiologic transitions and population dynamics; and inequality and violence studies. Focusing on these six major areas of burgeoning research within biocultural anthropology makes the proposed volume timely, widely applicable and useful to scholars engaging in biocultural research and students interested in the biocultural approach, and synthetic in its coverage of contemporary scholarship in biocultural anthropology. Students will be able to grasp the history of the biocultural approach, and how that history continues to impact scholarship, as well as the scope of current research within the approach, and the foci of biocultural research into the future. Importantly, contributions in the text follow a consistent format of a discussion of method and theory relative to a particular aspect of the above six topics, followed by a case study applying the surveyed method and theory. This structure will engage students by providing real world examples of anthropological issues, and demonstrating how biocultural method and theory can be used to elucidate and resolve them. Key features include: Contributions which span the breadth of approaches and topics within biological anthropology from the insights granted through work with ancient human remains to those granted through collaborative research with contemporary peoples. Comprehensive treatment of diverse topics within biocultural anthropology, from human variation and adaptability to recent disease pandemics, the embodied effects of race and racism, industrialization and the rise of allergy and autoimmune diseases, and the sociopolitics of slavery and torture. Contributions and sections united by thematically cohesive threads. Clear, jargon-free language in a text that is designed to be pedagogically flexible: contributions are written to be both understandable and engaging to both undergraduate and graduate students. Provision of synthetic theory, method and data in each contribution. The use of richly contextualized case studies driven by empirical data. Through case-study driven contributions, each chapter demonstrates how biocultural approaches can be used to better understand and resolve real-world problems and anthropological issues.

**The Alternative Introduction to Biological Anthropology** Dec 21 2022 In *The Alternative Introduction to Biological Anthropology*, Second Edition, author Jonathan Marks presents an innovative framework for thinking about the major issues in the field with fourteen original essays designed to correlate to the core chapters in standard textbooks. Marks explores such topics as how we make sense of data about our origins, where our modern ideas come from, our inability to separate natural facts from cultural facts and values as we try to understand ourselves, and the social and political aspects of science as a culturally situated mental activity.
