Cardiovascular disease (CVD) mortality remains the primary cause of death worldwide, despite the decline in developed countries. CVD includes a variety of heart and vascular conditions: hypertensive heart disease, stroke, and ischemic heart disease. Some risk factors such as age, gender, and family history cannot be changed. Other causes, including diet, tobacco, drugs of abuse, alcohol, and lack of exercise, can be altered. In this book, experts review the validity of various dietary approaches in prevention and treatment of CVD for promotion of heart health. In summary, nutrients, nutraceuticals, macronutrients, and gastrointestinal microbes modified by prebiotics and probiotics play important roles in heart health and disease. The five sections in the book give an overview of the role of vitamins and minerals, nutrition and nutrition counselling, dietary supplements, herbs and foods, protein and energy, and microbes. A useful part of the chapters in this book are the key facts and summary points. This book presents

a wealth of evidence that reveals how a healthy diet, exercise, and other healthy lifestyles can impact life-span and the risk of cancer, heart disease, diabetes and other chronic diseases. It provides easy-to-follow guidelines that will help individuals begin and maintain a healthy lifestyle for life. No infomercials here, just the facts from an authority who knows. An international cast of distinguished scholars here offers seventeen new contributions on the detail and development of Athenian law; the life, work, and political background of the Attic orators; and the intersection of Attic Comedy with Athenian law, politics, and society. In their detailed and careful use of evidence and deep awareness of social and historical contexts, the essays aspire to standards set by their distinguished honorand, Professor D.M. MacDowell.

The Chorus of Drama in the Fourth Century BCE seeks to upend conventional thinking about the development of drama from the fifth to the fourth centuries and to provide a new way of talking and thinking about the choruses of drama after the deaths of Euripides and Sophocles. Set in the context of a theatre industry extending far beyond the confines of the City Dionysia and the city of Athens, the identity of choral performers and the significance of their contribution to the shape and meaning of drama in the later Classical period (c.400-323) as a whole is an intriguing and under-explored area of enquiry. This volume draws together the fourth-century historical, material, dramatic, literary, and philosophical sources that attest to the activity and quality of dramatic choruses and, having considered the positive evidence for dramatic choral activity, provides a radical rethinking of two oft-cited yet ill-understood phenomena that have traditionally supported the idea that the chorus of drama "declined" in the fourth century: the inscription of *CHoroy~ me'los* in papyri and manuscripts in

place of fully written-out choral odes, and Aristotle's invocation of embolima (Poetics 1456a25-32). It also explores the important role of influential fourth-century authors such as Plato, Demosthenes, and Xenophon, as well as artistic representations of choruses on fourth-century monuments, in shaping later scholars' understanding of the dramatic chorus throughout the Classical period, reaching conclusions that have significant implications for the broader story we wish to tell about Attic drama and its most enigmatic and fundamental element, the chorus. In 1993 the world celebrated the 2500th anniversary of the birth of democracy in ancient Athens, whose polis - or citizen state - is often viewed as the model ancient Greek state. In an age when democracy has apparently triumphed following the collapse of communism in Eastern Europe, we tend to forget that the democratic citizen-state was only one of many forms of political community in Greek antiquity. This volume aims to redress the balance. Eighteen essays by established and younger historians examine alternative political systems and ideologies: oligarchies, monarchies, and mixed constitutions along with diverse forms of communal and regional associations such as ethnoi, amphiktyonies, and confederacies. The papers, which span the length and breadth of the Hellenic world from the Balkans and Anatolia to Magna Graecia and north Africa, highlight the immense political flexibility and diversity of ancient Greek civilization. A comprehensive study of how and why athletic contests, a characteristic feature of ancient Greek culture, disappeared in late antiquity. Images and inscriptions indicate how priests and cult personnel saw themselves and were viewed by others. Cultural records like dedications, honorific statues and decrees are central to understanding how the roles of priests and priestesses were constructed in social and political terms in post-classical Athens. The approaches in this study are both historical and archaeological, and elucidate the religious functions that the cult personnel fulfilled for the city, and their perception, by themselves and by others, as citizens of the polis. Published by Pontifical Biblical Institute, this bibliography treats all areas of investigation which involve the scientific study of the Bible. Athens and Sparta is an essential textbook for the study of Greek history. Providing a comprehensive account of the two key Greek powers in the years after 478 BC, it charts the rise of Athens from city-state to empire after the devastation of the Persian Wars, and the increasing tensions with their rivals, Sparta, culminating in the

Peloponnesian Wars. As well as the political history of the period, it also offers an insight into the radically different political systems of these two superpowers, and explores aspects of social history such as Athenian democracy, life in Sparta, and the lives of Athenian women. More than this though, it encourages students to develop their critical skills, guiding them in how to think about history, demonstrating in a lucid way the techniques used in interpreting the ancient sources. In this new third edition, Anton Powell includes discussion of the latest scholarship on this crucial period in Greek history. Its bibliography has been renewed, and for the first time it includes numerous photographs of Greek sites and archaeological objects discussed in the text. Written in an accessible style and covering the key events of the period – the rise to power of Athens, the unusual Spartan state, and their rivalry and eventual clash in all out war – this is an invaluable tool for students of the history of Greece in the fifth century BC.

reference. Focuses on nutritional value, functional properties, applications, bioavailability and bioaccessibility of food components
Covers food components by describing the effects of thermal and non-thermal technologies
Addresses shelf-life, sensory characteristics and health claims
This volume is a successor to the second volume of M. N. Tod's *Selection of Greek Historical Inscriptions* (OUP, 1948). It provides an up-to-date selection - with introduction, Greek texts, English translations, and commentaries which cater for the needs of today's students - of inscriptions which are important for the study of Greek history in the fourth century BC. The texts chosen illuminate not only the mainstream of Greek political and military history, but also institutional, social, economic, and religious life. To emphasize the importance of inscriptions as physical objects, a number of photographs have been included.

Wineries are facing new challenges due to actual market demands for the creation of products exhibiting more particular flavors. In addition, climate change has led to the requirement for grape varieties with specific features, such as convenient maturation times, enhanced tolerance towards dryness, osmotic stress, and resistance against plant-pathogens. The next generation of yeast starter cultures should produce wines with an appealing sensory profile and less alcohol. This Special Issue comprises actual studies addressing some of the problems and solutions for the environmental, technical, and consumer challenges of wine making today:

- Development of sophisticated mass spectroscopic methods enable the identification of the major metabolite spectrum of grapes/wine and deliver detailed insights in terroir and yeast-specific traits;
- Knowledge of the origin and reactions of reductive sulphur compounds facilitates the avoidance of unpleasant wine odors;
- Innovative physical-chemical treatments support effective and sustainable color extraction from red grape varieties;
- Enological enzymes from yeasts used directly or in the form of starter cultures are promising tools to increase the juice yields, color intensity, and aroma of wine;
- Natural and artificial *Saccharomyces* hybrids as well as collections of adapted wild isolates from various ecological niches will extend winemakers repertoire, allowing individual fermentations;
- Exact process control of wine fermentations by convenient computer programs will guarantee consistently high product quality.
