*The State of Food Security and Nutrition in the World 2019* Jan 18 2020 This year's report presents evidence that the absolute number of people who suffer from hunger continues to slowly increase. The report also highlights that food insecurity is more than just hunger. For the first time, the report provides evidence that many people in the world, even if not hungry, experience moderate food insecurity as they face uncertainties about their ability to obtain food and are forced to compromise on the quality and/or quantity of the food they consume. This phenomenon is observed globally, not only in low- and middle-income countries but also in high income countries. The report also shows that the world is not on track to meet global nutrition targets, including those on low birthweight and on reducing stunting among children under five years. Moreover, overweight and obesity continue to increase in all regions, particularly among school-age children and adults. The report stresses that no region is exempt from the epidemic of overweight and obesity, underscoring the necessity of multifaceted, multisectoral approaches to halt and reverse these worrying trends. In light of the fragile state of the world economy, the report presents new evidence confirming that hunger has been on the rise for many countries where the economy has slowed down or contracted. Unpacking the links between economic slowdowns and downturns and food insecurity and malnutrition, the report contends that the effects of the former on the latter can only be offset by addressing the root causes of hunger and malnutrition: poverty, inequality and marginalization.

**The future of food safety** Dec 29 2020 This technical summary prepared by FAO and the World Health Organization (WHO) reports on the two international food safety conferences held in Addis Ababa and Geneva in February and April 2019. It recalls the key actions and strategies presented to address current and future challenges to food safety globally and the steps required to strengthen commitment at the highest political level to scale up food safety in the 2030 Agenda for Sustainable Development. At a pivotal moment focussing international attention on actions needed to bolster food safety, this publication recalls the priorities discussed so that food safety strategies and approaches can be aligned across sectors and borders, reinforcing efforts to reach the Sustainable Development Goals and supporting the UN Decade of Action on Nutrition.

*Proceedings of the FAO International Symposium on The Future of Food* Aug 25 2020 While undernutrition persists, obesity and diet-related non-communicable diseases rise, including in low- and middle-income countries. What is wrong with our food systems? How will we feed a growing and urbanizing world population with natural resources that are more and more limited and depleted? In June 2019, a two-day symposium brought together academics, researchers, policymakers, representatives from civil society and private sector, parliamentarians and government agencies to discuss these questions (and many more), and explore pathways to a sustainable future of food and healthy diets for all. These proceedings report the presentations and discussions that revolved around the four main areas of (1) Research, Knowledge Gaps and Needs for Sustainable Food Systems and Healthy Diets; (2) Governance of food systems for healthy diets; (3) Building Consumer Confidence in Food Systems; and (4) Transforming Food Systems: What does it take?

*E-learning Methodologies* Jul 16 2022 The "E-Learning Methodologies" guide will support professionals involved in the design and development of e-learning projects and products. The guide reviews the basic concepts of e-learning with a focus on adult learning, and introduces the various activities and roles involved in an e-learning project. The guide covers methodologies and tips for creating interactive content and for facilitating online learning, as well as some of the technologies used to create and deliver e-learning.

**The Food and Agriculture Organization (FAO)** Sep 06 2021

*The State of Food Security and Nutrition in the World 2021* Jun 15 2022 In recent years, several major drivers have put the world off track to ending world hunger and malnutrition in all its forms by 2030. The challenges have grown with the COVID-19 pandemic and related containment measures. This report presents the first global assessment of food insecurity and malnutrition for 2020 and offers some indication of what hunger might look like by 2030 in a scenario further complicated by the enduring effects of the COVID-19 pandemic. It also includes new estimates of the cost and affordability of healthy diets, which provide an important link between the food security and nutrition indicators and the analysis of their trends. Altogether, the report highlights the need for a deeper reflection on how to better address the global food security and nutrition situation. To understand how hunger and malnutrition have reached these critical levels, this report draws on the analyses of the past four editions, which have produced a vast, evidence-based body of knowledge of the major drivers behind the recent changes in food security and nutrition. These drivers, which are increasing in frequency and intensity, include conflicts, climate variability and extremes, and economic slowdowns and downturns – all exacerbated by the underlying causes of poverty and very high and persistent levels of inequality. In addition, millions of people around the world suffer from food insecurity and different forms of malnutrition because they cannot afford the cost of healthy diets. From a synthesized understanding of this knowledge, updates and additional analyses are generated to create a holistic view of the combined effects of these drivers, both on each other and on food systems, and how they negatively affect food security and nutrition around the world. In turn, the evidence informs an in-depth look at how to move from silo solutions to integrated food systems solutions. In this regard, the report proposes transformative pathways that specifically address the challenges posed by the major drivers, also highlighting the types of policy and investment portfolios required to transform food systems for food security, improved nutrition, and affordable healthy diets for all. The report observes that, while the pandemic has caused major setbacks, there is much to be learned from the vulnerabilities and inequalities it has laid bare. If taken to heart, these new insights and wisdom can help get the world back on track towards the goal of ending hunger, food insecurity, and malnutrition in all its forms.

*World Food Safety Day 2021 Report* Sep 18 2022

**The Coming Famine** Nov 08 2021 Lays out a picture of impending planetary crisis - a global food shortage that threatens to hit by mid-century - that would dwarf any in our previous experience. This book describes a dangerous confluence of shortages - of water, land, energy, technology, and knowledge - combined with the increased demand created by population and economic growth

**Communications Toolkit 5e** Mar 12 2022 The Communications Toolkit contains practical advice, tips and strategies to enable learners to develop the communication skills needed to be successful students. The text helps students make a successful transition to tertiary studies, develop effective research skills for their discipline, approach academic writing with confidence, refine their writing skills, and enhance their face-to-face communication experience. This fifth edition includes more information than ever on academic integrity and referencing, while taking into account the changing nature of university communication including new information on recent text-types such as blogs, twitter, digital articles, online research questionnaires, presentation formats and Turn-it-in. As students are increasingly studying online, additional examples of online students' communication work and additional coverage of the communication challenges students face when going to university via an online channel are included. The direct, inclusive, motivational and student-friendly text addresses both individual students and those working in seminar or workshop groups, and provides activities for both types of student throughout the book. The new MindTap offers students resources for learning and revision, making this the strongest communications textbook in the market today. Learn more about the online tools [au.cengage.com/mindtap](http://au.cengage.com/mindtap)

**Sago Palm** Jun 22 2020 This open access book addresses a wide variety of events and technologies concerning the sago palm, ranging from its botanical characteristics, culture and use to social conditions in the places where it is grown, in order to provide a record of research findings and to benefit society. It discusses various subjects, including the sago palm and related species; differentiation of species of starch-producing palm; habitat, morphological, physiological and growth characteristics; culture and management; productivity of carbon dioxide; starch extraction and manufacture; characteristics and utilization of starch; and cultural anthropological and folkloristic aspects. Problems such as food shortages due to increasing populations, global warming and climate change, and decreasing reserves of oil and other underground resources, have become more pressing in recent years. In the context of these problems, the book examines the role of the sago palm in sustainable food production, in the manufacture of other foodstuffs, as a raw material for ethanol and in the manufacture of biodegradable plastics. In addition to academics, this book will be useful to researchers and government officials working for international agencies, national governments, municipalities, and other research organizations; technicians, researchers, managers, entrepreneurs, and others working in industries such as agriculture, plant production, food production, manufacturing, chemical engineering, energy production, and distribution.

**Food safety considerations to achieve best health outcomes under limited food availability situations** Sep 25 2020 Food security means that all people, at all times, have physical, social, and economic access to sufficient, safe and nutritious food that meets their food preferences and dietary needs for an active and healthy life. Food safety is interlinked with and essential to achieving food security. In times of food insecurity, humanitarian relief in the form of food aid is often distributed by specialized organizations, such as the United Nations World Food Programme (WFP). Under conditions of food assistance there are food safety considerations that must be taken in account so as to carefully evaluate the impact on food availability while minimizing the risk of exposure to foodborne contaminants among the receiving population, who may already be vulnerable to malnutrition. This case study lays out food safety consideration that might be helpful in situations where the impact of limited food availability is mitigated through food aid, which is meant to ensure acceptable health using

two scenarios— lead in maize and fumonisins in cereal grains. Risk management and recommendations are also provided on how to address these food safety issues.

*FAO Statistical Yearbook 2013* Mar 20 2020 The FAO Statistical Yearbook 2013 is the foremost collection and reference point for statistical data on food and agriculture globally. It provides a snapshot of related economic, environmental and social trends and issues. It breaks down a myriad of numbers gathered from around the world into four broad thematic categories: the state of the agricultural resource base, hunger dimensions, feeding the world and sustainability. A must-have publication for every researcher, statistician, academic and everyone interested in agricultural statistics.

*Food for All* Jun 03 2021

*Agriculture, Food and Nutrition for Africa* Nov 27 2020

*Activity Book – Our actions are our future* Jan 22 2023 Learn about the fascinating world behind food and agriculture in the World Food Day Activity Book. Follow the journey of food from the farm to your table and the great efforts food heroes make to get it there, no matter the circumstances. And find out how your choices and actions can make a difference. No matter your age, you can be a food hero!

**Towards Zero Hunger 1945–2030** May 02 2021 This book showcases a unique collection of images documenting how FAO has played a leading role in combating hunger worldwide since 1945. It highlights the Organization’s ongoing efforts to help its Members achieve “zero hunger” in a changing world that is facing new and pressing challenges from migration and climate change. The foreword by the FAO Director-General and the introduction to zero hunger by the Director of the FAO Office for Corporate Communication provide the context for FAO’s work and a real-life example of how “zero hunger” can change people’s lives for the better. In addition, there are profiles of the five recently appointed FAO Special Goodwill Ambassadors for Zero Hunger. Next, the photos and their captions, with some accompanying text, illustrate FAO’s work and significant moments in its history. Thus, the reader can see the single frames in the context of the whole picture.

*The Right to Food* Aug 17 2022 Office.

**Pulses** Jul 04 2021 The aim of raising global awareness on the multitude of benefits of pulses was integral to the International Year of Pulses. This coffee table book is part guide and part cookbook— informative without being technical. The book begins by giving an overview of pulses, and explains why they are an important food for the future. It also has more than 30 recipes prepared by some of the most prestigious chefs in the world and is peppered with infographics. Part I gives an overview of pulses and gives a brief guide to the main varieties in the world. Part II explains step-by-step how to cook them, what to keep in mind and what condiments and instruments to use. Part III underscores the five messages that FAO conveys to the world about the impact pulses have on nutrition, health, climate change, biodiversity and food security. Part IV illustrates how pulses can be grown in a garden patch with easy gardening instructions and how they are grown in the world, highlighting major world producers, importers and exporters. Part V takes the reader on a journey around the world showing how pulses fit a region’s history and culture and visits 10 internationally acclaimed chefs as they go the market to buy pulses. Back at their restaurant or home, each chef prepares easy dishes and gives their best kept secrets. Each chef provides 3 recipes that are beautifully illustrated.

*The State of Food Security and Nutrition in the World 2018* Feb 17 2020 New evidence this year corroborates the rise in world hunger observed in this report last year, sending a warning that more action is needed if we aspire to end world hunger and malnutrition in all its forms by 2030. Updated estimates show the number of people who suffer from hunger has been growing over the past three years, returning to prevailing levels from almost a decade ago. Although progress continues to be made in reducing child stunting, over 22 percent of children under five years of age are still affected. Other forms of malnutrition are also growing: adult obesity continues to increase in countries irrespective of their income levels, and many countries are coping with multiple forms of malnutrition at the same time – overweight and obesity, as well as anaemia in women, and child stunting and wasting.

*Activity Book World Food Day 2017* Feb 23 2023 Why are people migrating and how can we give them the choice to stay at home, if it’s safe to do so? The World Food Day 2017 Activity Book has packed some creative answers to these questions in a series of suitcases illustrated by Lorenzo Terranera. Suitcases open to reveal solutions to migration challenges, showing how the global goal to reach Zero Hunger can address many of the reasons that cause people to migrate. Learn how you can become part of the Zero Hunger Generation!

*Dictionary of Global Bioethics* Aug 05 2021 This Dictionary presents a broad range of topics relevant in present-day global bioethics. With more than 500 entries, this dictionary covers organizations working in the field of global bioethics, international documents concerning bioethics, personalities that have played a role in the development of global bioethics, as well as specific topics in the field. The book is not only useful for students and professionals in global health activities, but can also serve as a basic tool that explains relevant ethical notions and terms. The dictionary furthers the ideals of cosmopolitanism: solidarity, equality, respect for difference and concern with what human beings- and specifically patients - have in common, regardless of their backgrounds, hometowns, religions, gender, etc. Global problems such as pandemic diseases, disasters, lack of care and medication, homelessness and displacement call for global responses. This book demonstrates that a moral vision of global health is necessary and it helps to quickly understand the basic ideas of global bioethics.

*World Food Day, 16 October* Oct 15 2019

**The State of Food and Agriculture, 2006** Oct 07 2021 International food aid has rightly been credited with saving millions of lives and is often the only thing that stands between vulnerable people and death. However, it was a serious obstacle in the Doha Round of multilateral trade negotiations and has been sharply criticised as a donor-driven response that

creates dependency on the part of recipients and undermines local agricultural producers and traders upon whom sustainable food security depends. This issue of the 'State of Food and Agriculture' report examines the issues and controversies surrounding international food aid, particularly in crisis situations. It considers the ways in which food aid can support sustainable improvements in food security, in order to preserve its essential humanitarian role whilst minimising the possibility of harmful secondary impacts.

Global community meeting of the FAO GM Foods Platform Feb 11 2022 In order for Codex Alimentarius Members to share information on the results of Genetically Modified (GM) food safety assessments, the Food and Agriculture Organization of the United Nations (FAO) maintains an online database entitled “FAO GM Foods Platform”. Upon requests from several Members, a global community meeting of the FAO GM Foods Platform was organized from 10 to 13 September 2019 in Bangkok, Thailand. Ninety-nine people from 73 different Platform community members participated in the meeting. This report describes the key points of discussions that took place during the three and a half days of the meeting; these include, but are not limited to, clear benefits of data sharing, and good practices in the process of sharing and utilizing the shared data. While the main purpose of the Platform is to simply share the relevant official data globally, the community of the Platform was recognized as a great value, providing an opportunity for all focal points of the Platform to be able to directly communicate and learn from each other on technical issues around GM food safety assessments, and more importantly, to develop mutual trust among the community members from different countries. The Platform itself has become a model for an effective community of practice, resulting in many collaborative and successful joint activities, including bilateral and multilateral capacity development actions. At the end of the meeting, participants had the opportunity to network through the World Café to identify concrete steps for follow-up actions at the national and regional level.

**Diet, Nutrition, and the Prevention of Chronic Diseases** Apr 20 2020 Trends such as shifting dietary patterns and an increasingly sedentary lifestyle combined with smoking and alcohol consumption are major risk factors for noncommunicable chronic diseases such as obesity, diabetes, cardiovascular diseases such as hypertension and stroke, cancer dental diseases and osteoporosis. This report reviews the scientific evidence on the effects of diet, nutrition and physical activity on chronic diseases and makes recommendations for public health policies and programmes. Issues considered include the macro-economic implications of public health on agriculture and the global supply and demand for fresh and processed foods.

**Food for All** Oct 19 2022

Dimensions of Need Jul 24 2020 Food and people. Protect and produce. Building the global community. Food and agriculture: the future.

**Soil Management and Climate Change** Nov 15 2019 Soil Management and Climate Change: Effects on Organic Carbon, Nitrogen Dynamics, and Greenhouse Gas Emissions provides a state of the art overview of recent findings and future research challenges regarding physical, chemical and biological processes controlling soil carbon, nitrogen dynamic and greenhouse gas emissions from soils. This book is for students and academics in soil science and environmental science, land managers, public administrators and legislators, and will increase understanding of organic matter preservation in soil and mitigation of greenhouse gas emissions. Given the central role soil plays on the global carbon (C) and nitrogen (N) cycles and its impact on greenhouse gas emissions, there is an urgent need to increase our common understanding about sources, mechanisms and processes that regulate organic matter mineralization and stabilization, and to identify those management practices and processes which mitigate greenhouse gas emissions, helping increase organic matter stabilization with suitable supplies of available N. Provides the latest findings about soil organic matter stabilization and greenhouse gas emissions Covers the effect of practices and management on soil organic matter stabilization Includes information for readers to select the most suitable management practices to increase soil organic matter stabilization

FAO, the First 40 Years Jan 10 2022

Activity book - Food heroes May 14 2022 Did you know that the majority of the world’s food is produced by small-scale farmers? Most of the food you eat comes from a farm, whether it’s a crop, animal, dairy, fish or other type of farm. But farmers aren’t the only food heroes out there. From the cultivation of food to its arrival at your table, different food heroes are involved every step of the way. Discover the important role these heroes play and the digital innovations that are helping them and our food systems to perform better. Find out what each of us – governments, farmers, businesses and the general public – can do to improve how our food is produced and learn how you can make a difference!

**The State of Food Security and Nutrition in the World 2020** Apr 01 2021 Updates for many countries have made it possible to estimate hunger in the world with greater accuracy this year. In particular, newly accessible data enabled the revision of the entire series of undernourishment estimates for China back to 2000, resulting in a substantial downward shift of the series of the number of undernourished in the world. Nevertheless, the revision confirms the trend reported in past editions: the number of people affected by hunger globally has been slowly on the rise since 2014. The report also shows that the burden of malnutrition in all its forms continues to be a challenge. There has been some progress for child stunting, low birthweight and exclusive breastfeeding, but at a pace that is still too slow. Childhood overweight is not improving and adult obesity is on the rise in all regions. The report complements the usual assessment of food security and nutrition with projections of what the world may look like in 2030, if trends of the last decade continue. Projections show that the world is not on track to achieve Zero Hunger by 2030 and, despite some progress, most indicators are also not on track to meet global nutrition targets. The food security and nutritional status of the most vulnerable population groups is likely to deteriorate further due to the health and socio economic impacts of the COVID-19 pandemic. The report puts a spotlight on diet quality as a critical link between food security and nutrition. Meeting SDG 2 targets will only be possible if people have enough food to eat and if what they are eating is nutritious and affordable.

The report also introduces new analysis of the cost and affordability of healthy diets around the world, by region and in different development contexts. It presents valuations of the health and climate-change costs associated with current food consumption patterns, as well as the potential cost savings if food consumption patterns were to shift towards healthy diets that include sustainability considerations. The report then concludes with a discussion of the policies and strategies to transform food systems to ensure affordable healthy diets, as part of the required efforts to end both hunger and all forms of malnutrition.

*The State of the World's Land and Water Resources for Food and Agriculture* Feb 28 2021 The State of the World's Land and Water Resources for Food and Agriculture is FAO's first flagship publication on the global status of land and water resources. It is an 'advocacy' report, to be published every three to five years, and targeted at senior level decision makers in agriculture as well as in other sectors. SOLAW is aimed at sensitizing its target audience on the status of land resources at global and regional levels and FAO's viewpoint on appropriate recommendations for policy formulation. SOLAW focuses on these key dimensions of analysis: (i) quantity, quality of land and water resources, (ii) the rate of use and sustainable management of these resources in the context of relevant socio-economic driving factors and concerns, including food security and poverty, and climate change. This is the first time that a global, baseline status report on land and water resources has been made. It is based on several global spatial databases (e.g. land suitability for agriculture, land use and management, land and water degradation and depletion) for which FAO is the world-recognized data source. Topical and emerging issues on land and water are dealt with in an integrated rather than sectoral manner. The implications of the status and trends are used to advocate remedial interventions which are tailored to major farming systems within different geographic regions.

**Activity Book - Leave no one behind** Dec 09 2021 We are all connected! From our food to our cultures, environment and economies, we live in a globalized world. Climate change, conflict and inequality can often leave groups of people behind because of who they are or where they live. Building a better, more sustainable future for all means no one can be left behind. Find out how you can take action and be part of the change with the World Food Day Activity Book.

*Inside FAO – A truly global forum* Nov 20 2022 At the United Nations Conference of 1943, in Hot Springs, Virginia, a specific plan was drawn up for the establishment of a permanent organization in the field of food and agriculture. The Food and Agriculture Organization of the United Nations (FAO) was founded a few years later, on 16 October 1945 in Quebec City, in Canada, and then temporarily established in Washington, D.C., in the United States of America. On 29 November 1949, the FAO General Conference established that the new permanent headquarters would be located in Rome, Italy. Today, around 11 000 people work for FAO, from almost all of the 194 Member Nations. They include agronomists, ichthyologists, and experts in food security and forestry, as well as in politics, law, economics and social development. This purpose of this book is to recount the Organization's history, its mission and its day-to-day work in achieving its mandate: to eradicate hunger, food insecurity and malnutrition worldwide; eliminate rural poverty; promote the sustainable use of natural resources and encourage the development of more efficient and inclusive agricultural and food systems, through the definition of agreements and standards.

**Food and Nutrition in Numbers** Dec 21 2022 This pocketbook, part of the Statistical Yearbook suite of products, provides the reader with the most up-to-date numbers on food and nutrition globally. It is structured in two sections: the first one addresses thematic spreads related to food security and nutrition, including detailed food consumption data collected from national household budget surveys. The second one includes comprehensive country and regional profiles with indicators categorized by anthropometry, nutritional deficiencies, supplementation, dietary energy supplies, preceded by their "setting". The "Food and Nutrition in Numbers" pocketbook not only focuses on indicators of food security and nutritional outcomes, but also on the determinants that contribute to healthy lives.

Regional Food Safety Conference for Asia and the Pacific – Conference report May 22 2020 Unsafe food is a burden that costs to the region of Asia and the Pacific 225 000 deaths every year. In 2020, the spread of COVID-19 has emphasized the critical need for pre-requisite food safety programmes such as those offering good hygiene practices for food handling, which are at the core of the response to COVID-19. From 17 to 26 November 2020, the Food and Agriculture Organization of the United Nations (FAO) has organized the Regional Food Safety Conference for Asia and the Pacific. The conference was hosted in collaboration with the Government of Thailand, to discuss the current food safety situations and opportunities with a particular focus on the needs and opportunities for the region. It consisted of four sessions with one discussed for each day, that held specific focus on different aspect of food safety: national food control systems, science and technology, multi-sectoral collaboration and the international trades, communication and education. The dialogues covered traditional topics such as food safety standards as well as new and emerging subjects such as innovative technologies and the spread of misinformation on food safety. Integrated food safety systems and strong regional collaborations among stakeholders were highlighted as highly important elements of a One Health approach, and it was shown how food safety is a shared responsibility and everyone in the food chain has a role to play.

**A multi-billion-dollar opportunity – Repurposing agricultural support to transform food systems** Oct 27 2020 Public support mechanisms for agriculture in many cases hinder the transformation towards healthier, more sustainable, equitable, and efficient food systems, thus actively steering us away from meeting the Sustainable Development Goals and targets of the Paris Agreement. This report sets out the compelling case for repurposing harmful agricultural producer support to reverse this situation, by optimizing the use of scarce public resources, strengthening economic recovery from the COVID-19 pandemic, and ultimately driving a food systems transformation that can support global sustainable development commitments. The report provides policymakers with an updated estimate of past and current agricultural producer support for 88 countries, projected up until 2030. The trends emerging from the analysis are a clear call for action at country, regional and global levels to phase out the most distortive, environmentally and socially harmful support, such as price incentives

and coupled subsidies, and redirecting it towards investments in public goods and services for agriculture, such as research and development and infrastructure, as well as decoupled fiscal subsidies. Overall, the analysis highlights that, while removing and/or reducing harmful agricultural support is necessary, repurposing initiatives that include measures to minimize policy trade-offs will be needed to ensure a beneficial outcome overall. The report confirms that, while a few countries have started repurposing and reforming agricultural support, broader, deeper, and faster reforms are needed for food systems transformation. Thus, it provides guidance (in six steps) on how governments can repurpose agricultural producer support – and the reforms this will take.

*OECD-FAO Agricultural Outlook 2021–2030* Apr 13 2022 The Agricultural Outlook 2021-2030 is a collaborative effort of the Organisation for Economic Co-operation and Development (OECD) and the Food and Agriculture Organization (FAO) of the United Nations. It brings together the commodity, policy and country expertise of both organisations as well as input from collaborating member countries to provide an annual assessment of the prospects for the coming decade of national, regional and global agricultural commodity markets. The publication consists of 11 Chapters; Chapter 1 covers agricultural and food markets; Chapter 2 provides regional outlooks and the remaining chapters are dedicated to individual commodities.

**Rice in Human Nutrition** Jan 30 2021 On title page & cover: International Rice Research Institute

**The State of Food Security and Nutrition in the World 2019** Dec 17 2019 The State of Food Security and Nutrition in the World gives updates on the prevalence of undernourishment globally and the absolute number of undernourished, as well as the latest estimates for a number of global nutrition targets. This latest edition looks at the role of economic slowdowns and downturns in the rise of hunger and makes policy recommendations to safeguard food security and nutrition worldwide.
